

Release note for Device Manager 2.4.2

Notes

In order to connect to BlackTrax, Device Manager must be running on the same machine and BlackTrax must be at least v2.4.0 BETA or later.

System Requirements:

- PC running Windows 8.1 or newer
- Intel Core i3 2.0GHz or equivalent AMD processor
- 2GB RAM
- 200MB of free space
- Network Port with a 10.133.5.X IP address

Major changes:

- Compatibility with 3.x firmware
- Bug fixes

Known issues:

- None

Firmware Package Date:

February 2020

Build Numbers:

Device Manager: 2.4.2.12431

Server Version Requirement:

February 2016

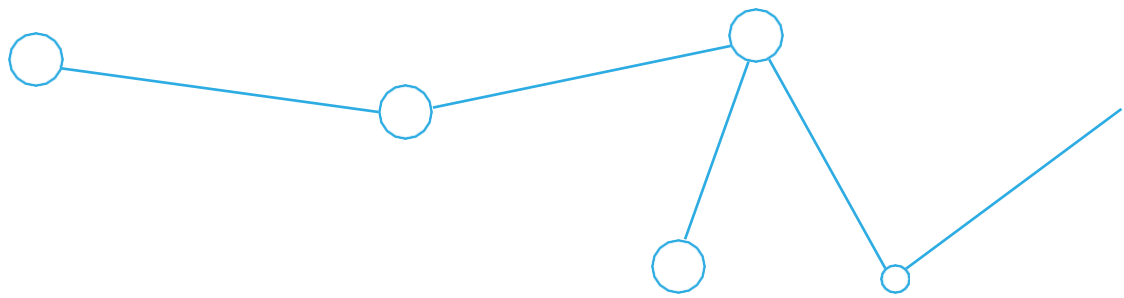

System Update Compatibility:

2.4.0 BETA

Features and Fixes:

Bug

- *Fixed: Device Manager would crash if several Mini Beacons changed ports quickly on the Sync Dock*
- *Fixed: Mini Beacons can now be set to 321 for both Beacon ID and Preset ID*
- *Fixed: TimeKeepers and Routers would sometimes not appear in Advanced Mode until a Beacon was connected*

Improvement

- *Device Manager will check to make sure a TimeKeeper/Router is able to run the 3.0.4 Firmware based on the version number the device currently has*
 - *If the device is running a 2.x version, then 3.0.4 will not be allowed to be uploaded*
 - *The device must have an existing 3.x version for Device Manager to allow it to be uploaded*

Design Review

- *Custom Device Presets are now shown in Yellow*
